

GL Account Key Changer (formerly NexGLKey by NexLAN)

\$800.00 List Price (VAR discounts available)

Using the built-in "key change" functionality in Pro Series System Manager, you can change item numbers, vendor numbers, customer number, and employee numbers - why not General Ledger account numbers?

Available in both a "GUI" and "non-GUI" (more powerful, less user-friendly) version, both versions of the GL Account Key Changer allow the merging of General Ledger accounts (have you consolidated divisions/departments and want to reflect that in your historical financials? - piece of cake!) and all changes are tracked in the Pro Series Key Change Log (sydxlog.dbf).

All GL account information in the Pro Series Accounts Payable, Accounts Receivable, General Ledger, Inventory Control, Job Cost, Purchase Orders, Payroll, and Sales Order modules, plus Lahey Manufacturing System Modules are changed.

The non-GUI version is a Visual FoxPro .prg (development copy of Visual FoxPro required) which allows the changing of multiple accounts at once - and even allows the complete changing of your GL account structure! You can change both the number and size of account segments - mapping all your history (yes, even including unposted transactions) into your new account schema. The GUI version is easily operated by an end-user from the "Custom" Menu, and no development copy of Visual FoxPro is ever required. While the GUI version does not allow changing your account structure, it does allow the merging of accounts. A screenshot of the Graphical User Interface version is shown below:

Notes: [1] This utility does *not* require the end-user to have purchased the "Source Code" option with their installation. [2] Deliverable is complete source/compiled Visual FoxPro program and/or form with instructions on executing the utility from the Pro Series "Custom" menu.
