

Customer Item Link (Pro 5, 6, 6.5, 7.x VFP, 7.x SQL)

A cost-effective way to give your customers the information they need—in the format they want. If customers don't know your internal item numbers, you can now do and see everything based on their item numbers and display their descriptions on all of the documents you send to them!

Features

- Enter your customers' item numbers into an item cross-reference table.
- Enter Sales Orders by customer item number.
- Do a lookup on the customer item number everywhere an item lookup can be done in Pro Series (Item Maintenance, Sales Order Entry, Invoice Entry).
- During Sales Order entry, sales order notes and memo are automatically populated with customer notes and memo you have set up for that customer item.
- Print the customer item number and description, if available, on the Sales Order, Invoice and Packing Slip.
