

Simple BOM (Pro 5, 6, 6.5, 7.x VFP, 7.x SQL)

Simple BOM was created for the smaller company that doesn't need or want a large, complex package to track manufacturing. Simple BOM provides all the necessary functionality for efficient, accurate records, yet implements quickly and operates intuitively.

Features

- Track the processing, costs, locations and Inventory for Finished Goods.
- Ability to enter multi-level bills of material
- Simple production-entry maintenance
- Immediate processing function lets you process one Finished Goods transaction at a time for the quantity you specify. There is also a feature for batch processing.
- When you build Finished Goods, components and sub-assemblies are relieved from inventory.
- Finished Goods posting supports multiple locations, stores, bins, lots and serialization.
- Cost rollup processing will roll up and recalculate costs of Finished Goods based on component cost.
- Change a component across all Bills of Material with the Mass Component Change utility.
- Multiple reporting options: Bill of Material Lists, Cost Rollup, Identify All Bills of Material (a component is used on) and Production Entries listing by date range
- New! Purchasing and Manufacturing Needs Report to assist with purchasing and estimating demand
- Does not modify Pro Series source code.

ONLY \$1200
