Workflow Benefits

eShipLink for ALERE Accounting

eShipLink is designed for companies using UPS Worldship™. With eShipLink the shipper enters an ALERE® sales order number, that is ready for shipment, into the UPS Worldship system. WorldShip looks through eShipLink for the sales order number entered and then imports the "ship to" address, purchase order number, sales order number, etc. into Worldship. Once this data is imported (usually just a matter of seconds) the shipping procedure continues as usual in UPS Worldship.

The person that creates the invoice using the standard ALERE® "Create Invoice process" will be able to post the actual UPS charges to the invoice. Packages will be listed individually when more than one package associated with an invoice will be shipped. These charges can be summarized by prompting ALERE to summarize the shipping charges into one line charge when printing the invoice.

The normal ALERE invoice procedure is started to post the shipping charges to an invoice. The user advances through the ALERE procedure. A screen will display the packages to be shipped that are associated with the Sales Order that was selected for invoicing.

As the invoicing procedure is completed the new invoice will calculate the UPS shipping charges. The user has the option to display the total charges on one item line or display a shipping line for each package associated with the invoice.

The eShipLink Viewer stores shipping information that has been invoiced for up to 120 days. This information can be sorted by dates in the "Posted" column for an audit of recent shipments.

Shipping Line	Shipping	Description	Cost	Amount Charged
0001	Shipping		4.80000	4.80000
0002	Shipping		4.80000	5.16000
0003	Shipping		4.80000	4.80000
0004	Shipping		4.80000	4.80000
Totals			19.20000	21.47000
